Organic Optical Frequency Distribution	Frequency	LOW	96.0%	Natural continuous 1/f frequency spectrum decay without artificial generator grid patterns. (FFT Variance: 9.82)
Natural Photographic Chromatic Balance	Color	LOW	94.5%	RGB channels demonstrate standard optical lens dispersion and balanced real-world lighting. (Channel Divergence: 0.00)

IMPORTANT SCIENTIFIC & LEGAL FORENSIC DISCLAIMER

Notice: Deepfake detection is inherently probabilistic. AI-generated scores and metrics should not be interpreted as absolute proof that media is authentic or manipulated. Results may contain false positives and false negatives due to compression artifacts, lighting conditions, or transmission noise. For legal, judicial, investigative, or enterprise compliance decisions, this automated report must be reviewed by qualified digital forensics experts alongside secondary chain-of-custody evidence.
